NATIONAL RABIES PREVENTION AND CONTROL PROGRAM
Animal Bite and Rabies Report Form Guide

Columns		Instructions
DEMOGRAPHICS		
Location		Indicate the Local Government Unit (LGU) (e.g. Province, City, Municipality) where cases were recorded. There is no need to indicate the exact facility (i.e. ABTC/ABC). Ensure that each LGU is listed on the same row across all quarterly sheets (Quarters 1–4) so that their totals are accurately reflected in the Annual Summary sheet.
Total Population		Enter the latest available total population of the LGU based on PSA Census.
ANIMAL BITE CASES		
Sex		Enter the number of male and female cases.
Age		Enter the number of cases <15 years old and >15 years old.
Category I (*FHSIS Indicator 1)*		Enter the number of Category I cases.
Category II	**PEP Eligible** *(FHSIS Indicator 3)*	Enter Category II cases where **PEP is INDICATED**. ● ***Primary (CCEEV)*** - Cases where primary CCEEV is indicated (**immunologically-naive or immunocompromised individual**). ○ *Immunologically-naive - refers to patients who have never received rabies pre-exposure prophylaxis (PrEP) or post-exposure prophylaxis (PEP), or who have received PrEP or PEP but did not complete the regimen or lack documented evidence of at least three (3) prior doses of anti-rabies vaccine.* ● ***Booster (CCEEV)*** - Cases where booster CCEEV is indicated (**previously-immunized, non-immunocompromised individual**) ○ *Previously-immunized individual - refers to patients who have documented evidence of at least three (3) prior doses of anti-rabies vaccine.*
	PEP Non Eligible	Enter Category II cases where **PEP is NOT INDICATED**

		• **Immunologically-naive**: Exposure of a **non-immunocompromised individual** to a **vaccinated animal** that is available for observation for 14 days, **EXCEPT** if any **high-risk criteria** are present *(shown below)*. ○ *Vaccinated animal - refers to a dog or cat with updated anti-rabies vaccination within the past two years, supported by documented evidence (i.e., a vaccination certificate) issued by a duly licensed veterinarian. The most recent vaccination must have been administered within the past twelve (12) months. The immunization status is not considered updated if the animal was not vaccinated by the due date of the next scheduled vaccination.* • **Previously-immunized**: Exposure of a **non-immunocompromised individual** who completed at least three (3) doses of anti-rabies vaccine within the last six (6) months, **EXCEPT** if any **high-risk criteria** are present: ○ Vaccinated >6 months ago with ≥3 doses ○ Biting animal cannot be observed, is sick or rabid, dies, or is a bat ○ Wounds in highly innervated areas (neck, head, genital area, hands, toes, or in very close proximity to the CNS) ○ Multiple or deep wounds ○ Patient has uncontrolled co-morbidities ○ Patient is from a hard-to-reach area with infrequent transportation to and from ABTC/ABC
	Total *(FHSIS Indicator 2)*	Total number of Category II Cases (automatically computed).
Category III	**PEP Eligible**	Enter Category III cases where **PEP is INDICATED**. • ***Primary (CCEEV+RIG)*** - Cases where primary CCEEV + RIG is indicated (**immunologically-naive or immunocompromised individual).** • ***Booster (CCEEV only)*** - Cases where booster CCEEV is indicated (**previously-immunized, non-immunocompromised individual**). RIG is **NOT** indicated.
	PEP Non Eligible	Enter Category III cases where **PEP is NOT INDICATED** • **Previously-immunized**: Exposure of a **non-immunocompromised individual** who completed at least three (3) doses of anti-rabies vaccine within the last six (6) months, **EXCEPT** if any **high-risk criteria** are present: ○ Vaccinated >6 months ago with ≥3 doses ○ Biting animal cannot be observed, is sick or rabid, dies, or is a bat ○ Wounds in highly innervated areas (neck, head, genital area, hands, toes, or in very close proximity to the CNS) ○ Multiple or deep wounds ○ Patient has uncontrolled co-morbidities ○ Patient is from a hard-to-reach area with infrequent transportation to and from ABTC/ABC
	Total *(FHSIS Indicator 5)*	Total number of Category III Cases (automatically computed).
Total PEP Eligible		Total number of Category II and Category III cases that are PEP eligible, used to estimate CCEEV requirements (automatically computed).
Total (Cat I+II+III)		Total number of all animal bite cases recorded used to estimate total morbidity from animal bites (automatically computed).

POST-EXPOSURE PROPHYLAXIS (PEP)		
PEP Completed *(case count, not number of doses/vials)*	**Category II**	Enter PEP Eligible Category II cases where **PEP was COMPLETED**. ● ***Primary (CCEEV)*** - Cases where primary CCEEV was completed (D0, D3, D7 ± D28 if indicated). ● ***Booster (CCEEV)*** - Cases where booster CCEEV was completed.
	Category III	Enter PEP Eligible Category III cases where **PEP was COMPLETED**. ● ***Primary (CCEEV+RIG)*** - Cases where primary CCEEV was completed (D0, D3, D7 ± D28 if indicated) and single-dose RIG was administered. ○ ERIG - Cases where ERIG was administered. ○ HRIG - Cases where ERIG was administered. ● ***Booster (CCEEV only)*** - Cases where booster CCEEV was completed.
PEP Coverage *(automatically computed)*	**Category II** *(FHSIS Indicator 4)*	● ***Primary (CCEEV)*** - Percentage of PEP Eligible Category II cases that completed primary CCEEV. ● ***Booster (CCEEV)*** - Percentage of PEP Eligible Category II cases that completed booster CCEEV.
	Category III *(FHSIS Indicator 6)*	● ***Primary (CCEEV+RIG)*** - Percentage of PEP Eligible Category III cases that completed primary CCEEV and received single-dose RIG. ● ***Booster (CCEEV only)*** - Percentage of PEP Eligible Category III cases that completed booster CCEEV and
	Total CCEEV Coverage	Percentage of PEP Eligible Category II and Category III cases that completed PEP.
BITING ANIMALS		
Type *(FHSIS Indicator 7)*		Enter the number of cases involving dogs, cats, and other animals (all other mammalian species susceptible to rabies).
Status		Enter the number of cases involving pet/domestic and stray/free-roaming animals. ● *Stray Animal - an owned or ownerless animal freely roaming the community*
HUMAN RABIES CASES		
Cases		Enter the number of human rabies cases as reported in **PIDSR (% RESU)**.
Incidence Proportion *(per 10^6)*		Measures the risk of human rabies infection per 10^6 persons (automatically computed).
